Linear regression

Aim:

To implement linear regression supervised machine learning algorithm .

Description:

1. Import stats for Linear regression through scipy
2. Provide a necessary dataset through Excel file
3. Finally we can obtain the linear regression output through matplotlib

as a graph Program:

```
import matplotlib.pyplot as plt from scipy
```

```
import stats
```

```
import pandas
```

```
df=pandas.read_excel("Linear data (1).xlsx")
```

```
print ("\n Original Dataframe\n", df)
```

```
slope,intercept,r,p,std_err=stats.linregress(df["x"],df["y"]) def myfunc(x):
```

```
    return slope*x+intercept
```

```
mymodel=list(map(myfunc,df["x"]
```

```
])) plt.scatter(df["x"],df["y"])
```

```
plt.plot(df["x"],mymodel)
```

```
plt.show()
```

Output :

Original Dataframe

X y

5 81

6 82

7 83

8 84

9 85

10 86

11 87

12 88

13 89

14 90

Result:

The programs were run successfully
